

General Information and Opinion: **Pfizer-Biontech COVID-19 Vaccine**

(Initially published December 13, 2020

Updated as of December 15, 2020)

General Information: ¹

Usage: Authorized under Emergency Use Authorization (EUA) that circumstances exist to justify the emergency use of drugs and biological products during the COVID-19 pandemic.

Indication (reason for usage): To prevent Coronavirus Disease 2019 (COVID-19) caused by SARS-CoV-2.

Contraindication (reason to withhold usage):

- Severe allergic reaction after first dose of the vaccine, and/or
- Prior severe allergic reaction to any ingredient of the vaccine

Age: Individuals 16 years of age or older.

Route of Administration: Via injection into the muscle.

Vaccination Series: 2 doses, 3 weeks apart.

Duration of Immunity: Currently unknown.

Alternative Vaccines: Currently there is no alternative vaccine available for COVID-19. The Federal Drug Administration (FDA) may allow emergency use of other COVID-19 vaccines in near future.

Safety Considerations:

- Rare chance of anaphylaxis (severe allergic reaction with symptoms including difficulty breathing, swelling of face and throat, bad rash, dizziness, weakness).
- Pregnancy: Currently no information about the safety of the vaccine when administered in a patient who is pregnant. Pregnancy however is not an absolute contraindication. The respective patient should discuss with her health care provider regarding whether to get the vaccination. According to the American College of Obstetricians and Gynecologists, COVID-19 vaccines should not be withheld from pregnant individuals who meet the criteria for vaccination.²
- Age of Infancy to 15 years old: No information yet.
- The vaccine will **not** cause COVID-19 viral infection.

Where to get the vaccine: The vaccine will be administered to health-care workers and patients in nursing homes first. It is not yet known where the general public will receive the vaccine.

Opinion (Dr. Schuman Tam): ¹

In my opinion, everybody should get the new COVID-19 vaccine, not only to reduce the risk of severe illness if they are infected with the virus, but also to reduce the spread of this deadly virus to friends, family members, and the general public. The vaccination is not only for each individual's own protection, but also to protect the people around them. This is the way to end the COVID-19 pandemic. If you have the rare chance of anaphylaxis to the vaccine or its components, you should consult with your primary physicians to refer you to an allergy and immunology specialist to see if the vaccine can be administered safely, if so indicated.
